

How Can Animal Studies Help Address Key Questions on Human Biomonitoring?

Claude Viau, D.Sc.
Chair in Toxicological Risk Analysis
University of Montreal

1

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

Objective of this presentation

- Through the illustration of several experimental protocols aimed at answering some specific questions about PAH biomarkers, contribute to the identification of elements that could readily be added to "classical" toxicological studies to help develop biomarkers of exposure to chemicals.

2

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

Outline: PAH as Case Study

- Background on PAH
- Controlled dose and exposure scenarios
- Effect of mixtures on toxicokinetics
- Chronic vs. acute exposures
- Diet vs. metabolite excretion
- BED vs. metabolite excretion
- Identification of new potential biomarkers
- Occupational vs. animal studies

3

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

Background on PAHs

- Ubiquitous in environment
- Some workers exposed to “high” doses
- Hundreds of individual compounds, some carcinogenic, others not
- Always come as mixtures
- Most frequently used biomarker = urine 1-OH-pyrene (1-OHP)
- Other biomarkers: DNA & protein adducts, other urinary OH-metabolites

4

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

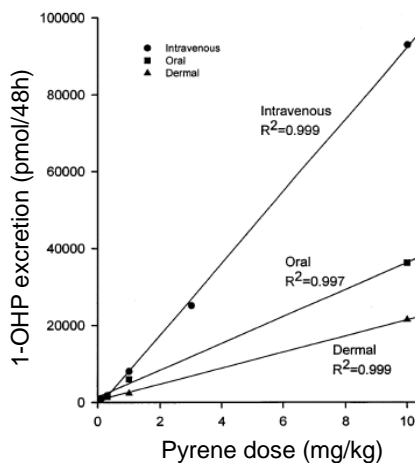

Université 
de Montréal

Controlled dose and exposure

Starting with the basis...

[Biomarker] – dose relationship for:

- I.V
- Oral
- Dermal

Viau et al. (1999)
Toxicol. Lett. 108: 201-208

5

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université de Montréal

Controlled dose and exposure

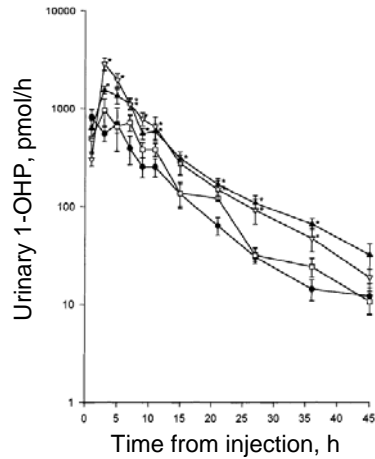

Bouchard and Viau (1996) TAP 139: 301-309

6

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université de Montréal

Mixtures and toxicokinetics

Constant dose of pyrene
Varying doses of BaP

1-OHP time course unchanged
Total 1-OHP excretion
increases at high BaP doses
but not at "realistic doses"

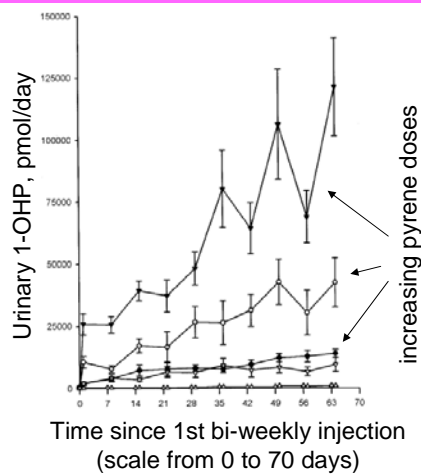

Bouchard et al. (1998) Arch. Toxicol. 72: 475-482

7

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

Sub-chronic vs. acute exposures

Acute studies:

→ $t_{1/2} = 5$ h

→ no accumulation in fat
(pyrene or 1-OHP)

Parallels observations
in workers (e.g. creosote)
Origin of accumulation
yet to be identified

Bouchard et al. (2002) JTEH 65: 1195-1209

8

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

Diet vs. metabolite excretion

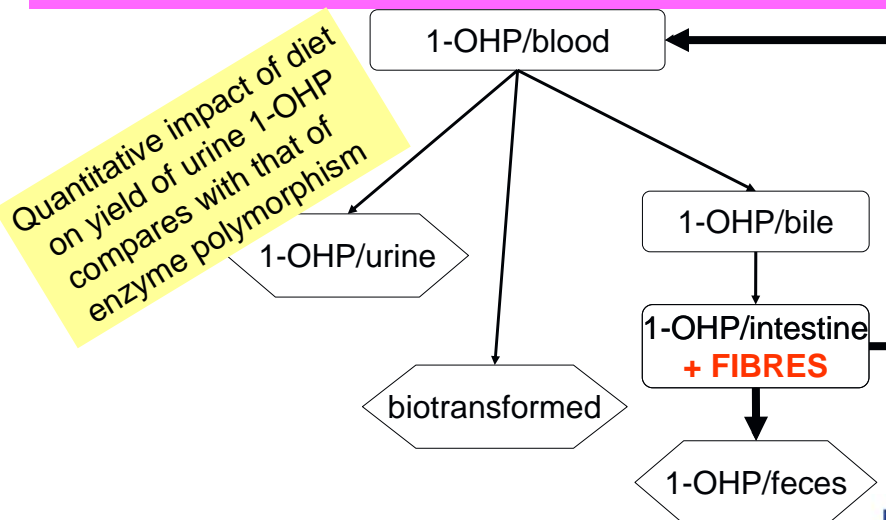

Viau et al. (2004) *Toxicol. Sci.* 78: 15-19

9

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université de Montréal

Diet vs. metabolite excretion

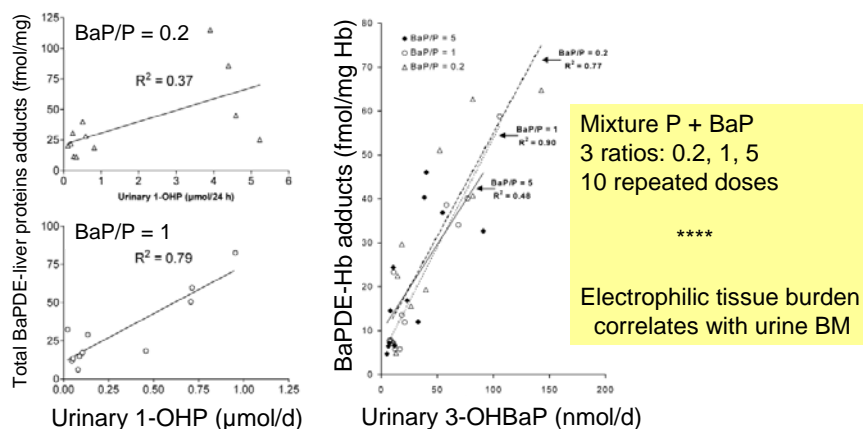

Quantitative impact of diet on yield of urine 1-OHP compares with that of enzyme polymorphism

10

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université de Montréal

BED vs. metabolite excretion

Tzekova et al. (2004) Arch. Toxicol. 78: 351-361

11

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

Identification of new biomarkers

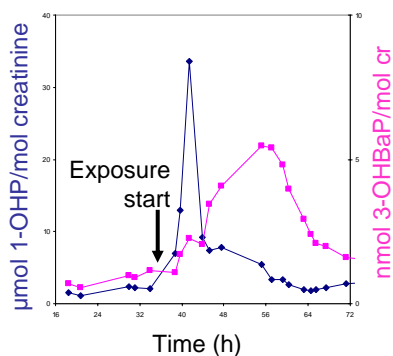

Ruzgyte et al. (2006) Biomarkers, in press

12

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

Occupational vs. animal studies

Worker with dermal, but no respiratory protection

Note time lag in peak excretion for 3-OHBaP vs. 1-OHP as previously observed in rats

M. Lafontaine, Personal Communication

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

Discussion: Useful animal data for BM

- Identification of potential BM from ADME
- Quantitative dose-[BM] relationship
- Time course, especially for short-lived BM
- Dose-[BM] relationship in acute vs. chronic
- Effect-[BM] relationships
- Effect of "environmental factors" e.g.:
 - Mixtures
 - Diet

14

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

Conclusion

- Animal studies are key in the development of BM for chemical exposure
- A first step in the identification of potential BMs and of the conditions under which they can be used
- A necessary step for the biomonitoring of substances for which volunteer studies are unethical

15

Viau - ICCA Biomonitoring Workshop
July 26-27, 2006

Université 
de Montréal

In closing...

- Thanks to the many colleagues, students and technical staff who participated in these numerous studies

- Thank you for your kind attention
